

## Electronic Signature Pads for AccuCare Web

Capture a client's physical signature when filing an AccuCare record to the client's chart by utilizing one of three Scriptel Signature Pads. Staff can also capture their physical signature using the signature pad and attached stylus, save it to their user file in AccuCare, then apply it to any documents they electronically sign-off on. Either of these functions are possible with the use of any of the three AccuCare-approved Scriptel branded signature pads.

By using standard drivers common across all major computer operating systems, the Scriptel signature pads do not require any additional software installed to your workstations. They operate similar to a USB mouse or keyboard. By simply plugging in the signature pad into your computer via USB connection, and your operating system will install the drivers and notify you (sometimes in seconds) that your device is ready to use. All signature pads support Internet Explorer, Firefox and Chrome. The screen technology is accurate and captures signatures precisely. Choose from 3 models:
