

AccuCare Release Notes 9.8H

This version of AccuCare includes new updates to Custom Forms, general maintenance and bug fixes.

New Features

1. Additional Access Points for Custom Forms

Additional access points to Custom Forms have been added AccuCare to improve workflow efficiencies.

Those areas include:

- Client Intake
- Medication Management
- Screening/Supplements
- Assessments
- Scheduler
- Episodes of Care

New Modify Delete Preview Print File and Sign Custom Forms Exit

Users are also able to assign what published custom forms appear for each module. This can be done in the Custom Forms Builder. For example, a user can publish a custom form, and only have it appear in Medication Management when the Custom Forms button from Medication Management is selected.

After the Custom Form is created or published, and assigned a module, they can be re-assigned through the main Custom Forms screen.

Setup > Custom Form Builder

Name	Assigned Module(s)	Created By	Last Modified	Published	Archived	Select

Enhancements and Bug Fixes

REMINDER: It is recommended that you are operating the AccuCare Web system on Internet Explorer 11 or higher, Firefox or Chrome. Some features in AccuCare are not supported in older browsers, therefore may not function properly.

- Minor fixes in Scheduler to how the system allows users to modify existing appointments
- Improvements to user identification in Episodes of Care
- Enhancements to schedule tab in User Setup to allow for sortable grids
- Converted how font size displayed in Custom Form Builder (from pixels to points)
- Enhanced Client Diagnosis view to expand or collapse for additional information
- Additional maintenance to improve speed and efficiency of system
